

## Dura-Trac Flooring Ltd.

### *Redefining how you look at flooring*

Dura-Trac™ is a unique temporary flooring system that has been used globally as modular laydown and roadway flooring on turf, soil, sand, gravel, snow, tarmac and concrete. By combining speed and ease of installation with unmatched durability and strength, we've created Dura-Trac to be the only temporary flooring you will ever need. Dura-Trac Flooring, by Surloc, is available as Dura-Trac SE, which features an open web system, or as Dura-Trac SB, which features a welded solid back for heavy vehicle traffic.

#### The New Genesis Flooring System

**Beam Technology:** The Beam is a fiber-reinforced polymer similar to carbon fiber. Characteristics of this Beam are strength, longevity, light weight, insect resistant, non-electrical conductivity, corrosion resistant, flame retardant and certified. It takes the place of 4x6 wood beams in laydown and scaffold floor applications. Time, labor and freight savings are also benefits. Precision lengths makes this product very versatile. Can come in either metric or imperial sizes.

**Connector Technology:** The Genesis connector system uses a proprietary nylon and fiberglass blend that gives the strength, self-lubrication, chemical resistance and fatigue stress resistance. The Genesis connector can withstand more than 23,000 PSI.
