

Seaman Corporation

“...known globally for its unique approach to managing its technology and product development platforms....”

Quality products and customer service

Seaman Corporation is known globally for its unique approach to managing its technology and product development platforms, resulting in architectural, truck tarp, geomembrane, dock seals and other industrial fabric products that offer a uniquely attractive appearance and long life. For high-profile applications, Seaman has also innovated the use of colorful Dupont Tedlar® top coatings that resist fading and dirt.

To accommodate customers' requirements for exceptional quality, wider widths and faster deliveries, Seaman also has invested more than \$50 million in capital improvements over the last 10 years at the company's manufacturing facilities in Wooster, Ohio, and Bristol, Tennessee. Another recent enhancement has been a new Oracle operating system, providing an up-to-date technology platform that supports the Seaman commitment to quality customer service and excellent operating efficiency.

Fabric brands include: Shelter-Rite® architectural and truck tarp fabrics; XR® geomembranes; and products designed for military structures, fuel tanks and dock seals.

IFAI member since 1962.
